As a developer would the model help you and why/why not?

Yes this would help me. it is well done and the model is easy so understand.

Do you think a domain expert (for example the Secretary) would understand the model why/why not?

I think a domain expert would understand this model. As I said it is easy to undestand and it has a clear association.

What are the strong points of the model, what do you think is really good and why?

The model is very good, good use of subclasses and good associations [1, p504], good association names [1, p149], good classes [1, p139] and the model follows the real world very well. It is also easy to understand.

What are the weaknesses of the model, what do you think should be changed and why?

First of all shouldn't there be a association between member and calender to show that members can view the calender.

Do you think the model has passed the grade 2 (passing grade) criteria?

Yes I think it has passed grade 2, since it is well done.
